

California Instruments Asterion AC 3kVA Series

High Performance Programmable AC / DC Power Source

500 VA - 18000 VA 200 / 400 Vac 250 / 500 Vdc

Advanced Features

- High power density in 1U/2U chassis up to 3kVA
- Intuitive touch panel control
- Innovative iX2[™] current doubling technology
- Multi-language display for global operation
- Auto paralleling for higher power
- Single phase 1U models and 1 or 3 phase selectable 2U models
- Complete avionic test suites (optional)
- ATE version available in both 1U and 2U

Performance. Reliance. Brilliance.

Inspired by the enduring power of a brilliant star, the California Instruments Asterion line of AC power sources by AMETEK Programmable Power combines intelligence and flexibility to create an advanced platform of AC solutions. This easy-to-configure design features sophisticated technology for delivering high performance, programmable AC and DC power. Its sleek design packs maximum power density into a low-profile form factor with an intuitive touch screen interface placing that power at your fingertips. Centralized control and unparalleled modularity make Asterion the most adaptable platform on the market. Its groundbreaking capabilities set the standard for affordable, precision power sources.

Maximize rack space utilization with leading AC power density in a 1U/2U chassis.

Employ full output power over widest voltage range with iX2™ technology.

Quickly and expertly control the AC source with intuitive touchscreen.

Control via Front Panel Touchscreen & Encoder or available digital control interfaces.

The Asterion AC Series is Digital Signal Processor (DSP) controlled and can be operated from the intuitive, easy to use front panel touchscreen or the Ethernet LXI, USB and RS232 standard control interfaces, as well as through the optional GPIB control interface.

The touchscreen function group icons include a Dashboard, Output Programing Parameters, Measurements, Sequencing, Configuration, Control Interfaces, Applications, and System Settings. Function selection and parameter entry can be achieved either by direct selection from the touchscreen or by using the encoder selector button. The control resolution is adjusted by a dynamic rate change algorithm that combines the benefits of precise control over small parameter changes with quick sweeps through the entire range.

Applications

The Asterion AC Series is designed for testing today's complex electronics, including avionics, telecommunications and commercial electronics requiring low profile, light weight power sources with high power density. Other applications include:

- · Commercial and military avionics test
- AC power simulation
- Manufacturing and process control
- Frequency & voltage conversion
- IEC standards testing
- ATE applications

iX2[™] Constant-Power Mode Output Characteristic

The iX2[™] Constant-Power mode has an output characteristic where full rated output power is available from 50% of full-scale output voltage to 100% of full-scale output voltage, as depicted in the graphs of Figure 1 1 and Figure 1 2. The output current versus output voltage follows a constant-power relation where the output current would be 200% of the full-scale value when the output voltage is 50% of full scale. The current ratings are also a function of output frequency, as shown in Figure 1 1 for the AST 751, AST 1501, AST 2253, and AST 3003 models above 500 Hz, and in Figure 1 2 for the AST 501 and AST 1503 models above 1 kHz.

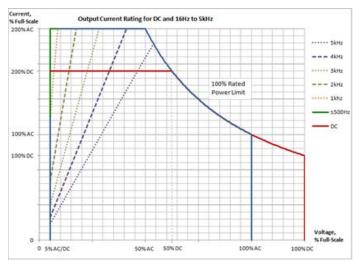

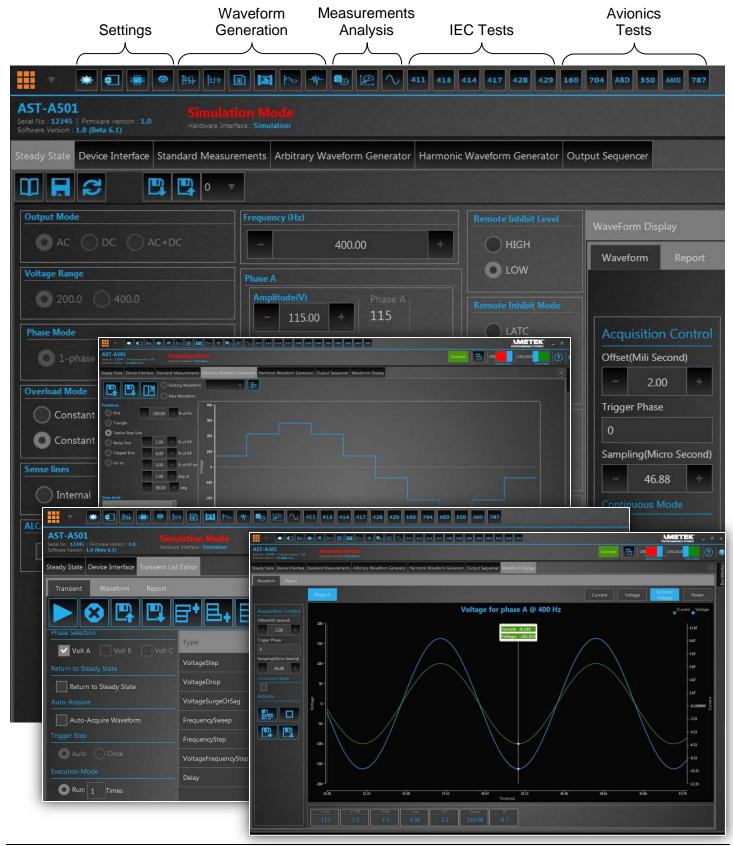

Figure 1 1. iX2[™] Constant-Power: Output Current Versus Voltage, AST 751, AST 1501, AST 2253, AST 3003 (1-Phase)

Figure 1 2. iX2[™] Constant-Power: Output Current Versus Voltage, AST 501, AST 1503, AST 3003 (3-Phase)

Asterion AC Virtual Panels (Graphical User Interface)

Virtual Panels allow remote control of the Asterion AC power source as well as programming communication and monitoring for the Asterion ATE model without front panel display.

Model	All Models
Maximum RMS Output Current	200% of the full-scale RMS current at ≤50% of full-scale voltage. Refer to Figure 1-1 and Figure 1-2 for graphs of current rating as a function of output frequency.
iX2™ Constant-Power Mode	Constant-Power output capability in each output voltage range with full rated output power from 50% of full-scale output voltage to 100% of full-scale; the output current increases to 200% of rated current at 50% full-scale output voltage from 100% rated current at 100% of full-scale voltage. Refer to Figure 1-1 and Figure 1-2 for graphs of current rating as a function of output frequency.
AC and AC+DC Output Voltage, Full-Scale	Low-Range: 0 to 200 V(RMS); High-Range: 0 to 400 V(RMS)
DC Output Voltage, Full-Scale	Low-Range: 0 to 250 VDC; High-Range: 0 to 500 VDC
DC Offset Voltage, Typical	±20 mVDC, ≥40 Hz
Output Float Voltage	566 V(PK), maximum from either output terminal to chassis
Voltage Programming Accuracy	\pm (0.1% of actual + 0.2% of full-scale) for DC, and AC 16 Hz to 1 kHz; >1 kHz, add \pm 0.2% of full-scale/kHz; add \pm 0.1% of full scale for AC+DC mode. Valid from 5% of full-scale to 200 VAC(RMS)/250 VDC in low-range and 400 VAC(RMS)/500 VDC in high-range; with sense leads connected.
Voltage Resolution	≤0.02 V, AC, DC, and AC+DC mode
Voltage Temperature Coefficient, Typical	≤100 ppm/°C of full-scale
Voltage Stability, Typical	±0.1% of full-scale over 8 hours; with constant line, load, and temperature; with sense leads connected
Voltage Distortion	0.25% maximum, 16 Hz to 100 Hz; 0.5% maximum, >100Hz to 500 Hz; and
	1% maximum, >500 Hz to 1 kHz, plus 1%/kHz to 5 kHz; with full linear load or no load
Voltage Slew Rate, Typical	≥10 V/µs with full-scale programmed voltage step
Current Programming Range	Programmable from zero to 200% of full-scale rating in each output range. Refer to Figure 1-1 and Figure 1-2 for graphs of current rating as a function of output frequency.
Current Programming Accuracy	\pm (0.3% of actual + 0.5% of full-scale) for DC, and AC 16 Hz to 1 kHz; >1 kHz, add \pm 0.3% of full-scale/kHz; add \pm 0.1% of full-scale for AC+DC mode. Valid from 5% of full-scale to 100% of full-scale.
Line Regulation	±0.015% of full-scale voltage, for a ±10% input line change; DC, or 40 Hz to 5 kHz.
Load Regulation	±0.025% of full-scale voltage, for 100% of rated resistive load change; DC, or 40 Hz to 1 kHz, above 1 kHz, add ±0.015% of full-scale/kHz

AC/DC Output Specifications Continued		
Model	All Models	
Voltage and Current Programming Overrange, Typical	1% of full-scale	
Noise Level, Typical	AC output: 450 mV(RMS), low-range; 750 mV(RMS), high-range;	
	at ≥40 Hz output frequency; bandwidth, 20 kHz to 1 MHz;	
	DC output: 400 mV(RMS), low-range; 700 mV(RMS), high-range;	
	bandwidth, 20 Hz to 1 MHz.	
Remote Sense	5 V(RMS), maximum total output lead drop (2.5 V per lead)	
Crest Factor	AST 751, AST 1501, AST 2253: 5:1 of full-scale current in each output range (ratio of peak output current to RMS full-scale output current).	
	AST 501, AST 1503, AST 3303: 7:1 of full-scale current in each output range (ratio of peak output current to RMS full-scale output current).	
Power Factor	0, lagging to 0, leading	
Frequency Range	Standard models: DC, and 16 Hz to 1.3 kHz;	
	LF option: DC, and 16 Hz to 550 Hz;	
	HF option: DC, and 16 Hz to 5.5 kHz.	
Frequency Accuracy	Standard models: ±(0.01% of actual + frequency resolution/2);	
	FC option: ±0.25%.	
Frequency Resolution	0.01 Hz resolution, 16-81.91 Hz;	
	0.1 Hz resolution, 82-819.1 Hz;	
	1 Hz resolution, 820-5000 Hz;	
	with LKM/LKS option: 1 Hz resolution, 16-5500 Hz.	
Frequency	10 ppm/ºC of full-scale	
Temperature Coefficient, Typical		
Phase Programming Range	0.0 º to 360.0 º, relative to external synchronization signal; in multi-phase group, Auxiliary unit output	
	voltage is relative to the Master unit Phase A output voltage, with the Master unit as reference 0°.	
Phase Accuracy	$\pm 1^{\circ}$, 16 Hz to 100 Hz; $\pm 2^{\circ}$ >100 Hz to 1 kHz, plus $\pm 1^{\circ}$ /kHz above 1 kHz	
Phase Programming Resolution	±0.4º

Peak Current Resolution	5 mA; 1-phase mode in 3-phase models: 15 mA.	
Power Range, Full-Scale	0-1.5 kW; 1-phase mode in 3-phase models: 4.5 kW	
Power Accuracy	±(0.4% of actual + 0.7% of full-scale)	
Power Resolution	1 W	

¹Accuracy specifications apply above 100 counts of resolution; for multi-chassis configurations, multiply the output current and power, and their accuracy specifications, by the number of chassis.

Harmonic Measurement		
Parameter	Specification	
Frequency, Fundamental	16-81.91 Hz, 82.0-819.1 Hz, 820-960 Hz	
Fundamental Frequency Resolution	0.01 Hz: 16-81.91 Hz; 0.1 Hz: 82.0-819.1 Hz; 1 Hz: 820-960 Hz	
Harmonic Frequency	32 Hz to 48 kHz; 2nd to 50th harmonic	
Fundamental Voltage Accuracy	±(0.2% of actual + 0.3% of full-scale) for 16 Hz to 960 Hz	
Fundamental Voltage Resolution	20 mV	
Harmonic Voltage Accuracy	±(0.2% of actual + 0.3% of full-scale + 0.3% of full-scale/kHz).	
Harmonic Voltage Resolution	20 mV	
Fundamental Current Accuracy	±(0.4% of actual + 0.4% of full-scale) for 16 Hz to 960 Hz.	
Fundamental Current Resolution	2 mA; 1-phase mode in 3-phase models: 6 mA.	
Harmonic Current Accuracy	±(0.4% of actual + 0.6% of full-scale + 0.4% of maximum/kHz).	
Harmonic Current Resolution	2 mA; 1-phase mode in 3-phase models: 6 mA.	

Protection Functions		
Output Overvoltage Protection	Programmable to 115% of full-scale output voltage;	
(OVP)	exceeding OVP threshold results in shutdown of output.	
	User-selectable constant-current mode or current-limit mode, with programmable current setpoint;	
Output Current Limit Protection	in constant-current mode, output current is regulated to setpoint;	
Output Current Limit Protection	in current limit mode, exceeding current-limit setpoint results in shutdown of output;	
	current limit delay: programmable from 100 ms to 5s.	
AC Input Overcurrent Protection	Internal fuses in each phase for fault isolation; not user replaceable	
AC Input Undervoltage Protection	Automatic shutdown for insufficient AC input voltage	
AC Input Transient Protection	Protection to withstand EN61326-1, Class-A surge levels	
Overtemperature Protection (OTP)	Internal temperature monitors cause shutdown of output if temperature thresholds are exceeded	

Environmental		
Parameter	Specification	
Operating Temperature	0°C to 40°C (32° F to 104° F)	
Storage Temperature	-40°C to 85°C (-40°F to 185° F)	
Altitude	2000 m (6,562 ft)	
Relative Humidity	5-95 %, non-condensing	
Vibration	MIL-PRF-28800F, Class 3; 5-500 Hz per Paragraph 4.5.5.3.1.	
Shock	MIL-PRF-28800F, Class 3; 30G half-sine with 11ms duration per Paragraph 4.5.5.4.1.	
Transportation Integrity	ISTA Test Procedure 1A	

Mechanical		
Parameter	Specification	
1U Dimensions	H, 1.75" (44.45 mm); W (front panel), 19.0" (483 mm); D, 23.0" (584 mm); H, 1.75" (44.45 mm); W (chassis), 16.9" (429 mm); D, 23.0" (584 mm).	
2U Dimensions	H, 3.47" (88.1 mm); W (front panel), 18.9" (480 mm); D, 23.0" (584 mm); H, 3.47" (88.1 mm); W (chassis), 16.9" (429 mm); D, 23.0" (584 mm).	
1U Unit Weight	AST 501/751: 19 lb / 8.6 kg; AST 1501: 22 lb / 10 kg.	
2U Unit Weight	AST 1503/2253: xx lb / x.x kg; AST 3003: xx lb / xx kg.	
1U Shipping Weight	AST 501/751: 29 lb / 63.8kg; AST 1501: 32 lb / 70.4 kg.	
2U Shipping Weight	AST 1503/2253: xx lb / xxkg; AST 3003: 54 lb / 24.5 kg.	
Chassis Material	Steel with plastic front panel	
Chassis Finish	Galvanized Zinc, G90	
Installation	Protective covers are provided for AC input and AC/DC output; bench-top: removable feet for the chassis; rack-mount: per ANSI-EIA-310-D, with front panel mounting flanges and chassis provisions for mounting rack slides; slides option available.	
Cooling	Force-air cooling; linear, variable fan speed control; air intake at front/sides and exhaust at rear.	
Acoustic Noise	1U Models: 65 dBA, maximum; measured at 1 m with A-weighting; 2U Models: 65 dBA, maximum; measured at 1 m with A-weighting.	

Regulatory Compliance	
Parameter	Specification
EMC	CE marked for EMC Directive 89/336/EEC per EN61326-1:2013, Class-A for emissions and immunity as required for the EU CE Mark.
Safety	CSA NRTL certified for US and Canada to CAN/CSA-C22.2 No. 61010-1-12, UL 61010-1 Third Edition. CE marked for LVD compliance 2006/95/EC to EN 61010-1 Third Edition as required for the EU CE mark.
CE Mark LVD Categories	Installation Overvoltage Category: II; Pollution Degree: 2; Class II equipment; indoor use only.
RoHS	CE marked for compliance with EU Directive 2011/65/EU for Restriction of Hazardous Substances in Electrical and Electronic Equipment.

Operational Characteristics	
Parameter	Characteristic
Parallel Operation	Multi-chassis configurations could be formed with up to six units paralleled in 1-phase or multi-phase groups, using one master unit and up to five units operating as auxiliary units. Setup of the multi-chassis configuration is automatically accomplished when the chassis are interconnected with the interface cables, and require no user setup, except to wire the outputs.
Output Relays	Isolation and range relays are provided internally to automatically configure the outputs, turn the output on/off, and disconnect the load from the output amplifier when in the off state.
Non-Volatile Memory	16 complete instrument setups and transient lists, 100 events per list.
Transient Generator	Output could be controlled to produce transient events with 500 µs programming resolution: Voltage: drop, step, sag, surge, sweep; Frequency: step, sag, surge, sweep; Voltage and Frequency: step, sweep.
Reliability	MTBF: AST 501, AST 751, AST 1501, > 110,000 hr; calculation method: Telecordia SR-332, Issue 3; method: Method I (Parts Count), Case 2 (Temp 40°C, Stress 50%, Burn-in 4 hr); ambient temperature: 40°C; temperature variation: 10°C; environment: Ground, Fixed, Controlled; duty cycle: 100%; stress factor: 50%; quality level: 1; upper confidence level: 90%
Calibration	Calibration interval is 1 year; calibration is firmware-based through the digital interface or Virtual Panels.
Fault Identification	On-board diagnostics identify when an assembly has experienced a fault.
XLOAD Output Characteristic	User-selectable XLOAD mode provides revised regulation characteristics for additional stability margins when driving large capacitive loads.
Automatic Level Control (ALC)	User-selectable ALC operation enables a digitally implemented feedback control loop to provide precise regulation of the RMS value of the output voltage.
LF, option	Low frequency option: output frequency range of 16 Hz to 550 Hz.
HF, option	High frequency option: output frequency range of 16 Hz to 5.5 kHz.
FC, option	Reduced frequency control option: ±0.25% accuracy of output frequency; deletes external waveform programming signal.

LKM , option (Clock and Lock Mode)	Clock and Lock interface option for master unit; multi-phase configurations could be formed with up to six units using the Clock and Lock signal interface. One unit acts as the master and provides the reference signals to the other slave units. Clock and Lock interface option, master unit.
LKS , option (Clock and Lock Mode)	Clock and Lock interface option for auxiliary unit; multi-phase configurations could be formed with up to six units using the Clock and Lock signal interface. One unit acts as the master and provides the reference signals to the other slave units.
MB, option	Upgrades all chassis to Enhanced models in a multi-chassis configuration.

Front Panel Options							
Option	Description						
	Touch-Panel, TFT color LCD display with menu-based control;						
	rotary encoder for menu navigation and parameter adjustment and entry, with integrated selection switch.						
	POWER switch: turns unit on/off.						
	OUTPUT switch: turns output of the unit on/off.						
	OUTPUT LED: integrated into the OUTPUT switch; indicates that the output of the unit has been turned on.						
Enhanced	CC LED: indicates that the unit is in constant-current mode and the output current is being regulated.						
	CV LED; indicates that the unit is in constant-voltage mode and the output voltage is being regulated.						
	HI RNG LED: indicates that the high-voltage output range has been selected;						
	FAULT LED: indicates that an internal fault has been detected and the output has been shut down.						
	REM LED: AST 501, AST 751, AST 1501, indicates that the unit is under control of the remote digital interface, and LXI status annunciation.						
	AST 1503, AST 2253, AST 3003: indicates that the unit is under control of the remote digital interface.						
	LXI LED: AST 1503, AST 2253, AST 3003, LXI status annunciation.						
	No front-panel display; only status indicators.						
	POWER switch: turns unit on/off.						
	UPDATE switch: enables bootloader for firmware upgrade.						
	POWER LED: indicates that the POWER switch has turned the unit on.						
	OUTPUT LED: indicates that the output of the unit has been turned on.						
ATE	CC LED: indicates that the unit is in constant-current mode and the output current is being regulated.						
	CV LED; indicates that the unit is in constant-voltage mode and the output voltage is being regulated.						
	HI RNG LED: indicates that the high-voltage output range has been selected.						
	FAULT LED: indicates that an internal fault has been detected and the output has been shut down.						
	REM/LAN LED: indicates that the unit is under control of the remote digital interface, and LXI status annunciation.						

Firmware / Software O	ptions
Option ¹	Description
B787, (MC)	Avionics Electrical Power Quality Test Software; Boeing 787B3-0147 A/B/C (B787).
AMD, (MC)	Avionics Electrical Power Quality Test Software; Airbus AMD24 C (A400M).
B787 & AMD, (MC)	Includes both B787 and AMD options.
AVSTD, (MC)	Avionics Electrical Power Quality Test Software Package; includes 160 (RTCA/DO160 E/F/G), 704 (MIL-STD 704 A/B/C/D/E/F), ABD (Airbus ADB100.1.8 D/E), A350 (Airbus ADB100.1.8.1 B/C).
AVALL, (MC)	Avionics Electrical Power Quality Test Software Package; includes AVSTD, B787, AMD.
411, (MC)	IEC 61000-4-11 voltage dips and interruptions EMC test software.
413, (MC)	IEC 61000-4-13 harmonics and Inter-harmonics EMC test hardware and software.
411 & 413, (MC)	Includes both 411 and 413 options.
МС	Options are installed in all chassis of a multi-chassis (MC) configuration.
¹ For Δvionics ontions refere	ence the Avionics Software Manual (P/N 4994-971) for test details. All options require the use of the provided

¹For Avionics options, reference the Avionics Software Manual (P/N 4994-971) for test details. All options require the use of the provided Asterion Virtual Panels, graphical user interface Windows application software (reference CD ROM CIC496).

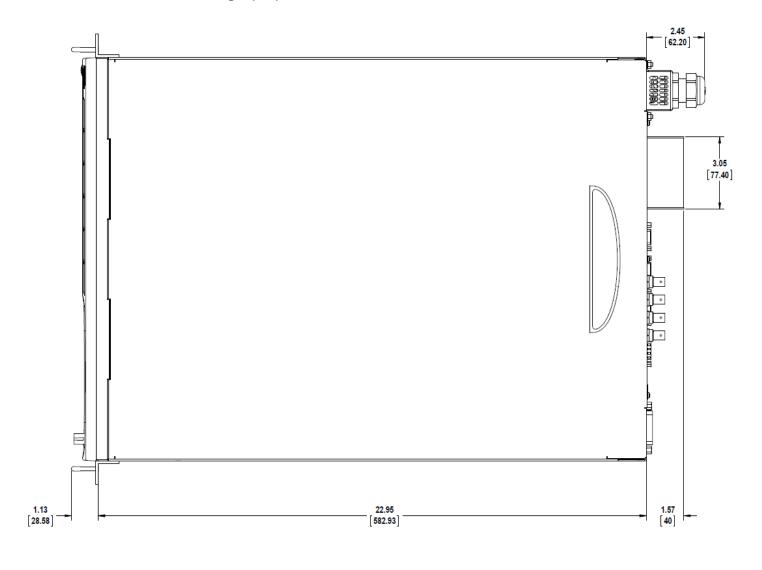

Remote Control Digital Interfa	ce Characteristics
Interface	Characteristics
LAN	Ethernet 10BASE-T and 100BASE-T over twisted-pair cables compliant with IEEE 802.3; Connector: 8P8C modular jack.
USB	Serial interface compliant to USB 2.0; Connector: Type-B receptacle.
RS-232C	Serial interface compliant to RS-232C; Protocol: data bits, 7 with parity and 8 without parity; stop bits, 2; baud rate, 9600 to 115200; handshake, CTS and RTS; Connector: Subminiature-D, 9-contact receptacle.
IEEE-488 (Option)	Parallel interface complies with IEEE-488.1, IEEE-488.2, and the SCPI command specification; command execution response time, 10 ms, typical; connector: IEEE-488.1 compliant.
Firmware Upgrade	Firmware can be upgraded through the USB or RS-232 interfaces. Upgrade through LAN or IEEE-488 is not supported.

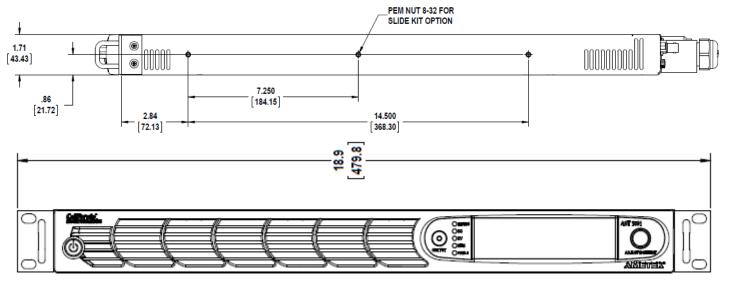

Function	Characteristics							
	Signal input for output voltage waveform programming by external analog reference;							
External Analog Programming of	user-selectable signal ranges: 0-1.77 V(RMS)/0-3.54 V(RMS)/0-7.07 V(RMS) for zero to full-scale RMS output voltage, with AC input waveform at 16Hz to 5.5 kHz;							
Output Voltage	programming accuracy, ±2% of full-scale output;							
Waveform	individual inputs provided for each output phase; input impedance, 40 k Ω , typical;							
	safety isolation SELV-rated, referenced to chassis;							
	user-selectable function with the same input signal connection as External Analog Output Voltage Amplitude Programming.							
	Signal input for output voltage amplitude programming of waveform that is set by internal controller reference;							
	user-selectable signal ranges: 0-2.5 VDC/0-5 VDC/0-10 VDC for zero to full-scale RMS of internally programmed output voltage;							
External Analog Programming of	programming accuracy, ±2% of full-scale output;							
Output Voltage Amplitude	individual inputs provided for each output phase; input impedance, 40 k Ω , typical;							
	safety isolation SELV-rated, referenced to chassis;							
	user-selectable function with the same input signal connection as External Analog Output Voltage Waveform Programming.							
	Signal input for output voltage modulation of waveform set by internal controller reference;							
External Analog	0-5 V(RMS) signal range for 0-20% of full-scale output voltage amplitude modulation;							
Modulation of	programming accuracy, ±2% of full-scale output;							
Output Voltage	individual inputs provided for each output phase; input impedance, 40 k Ω , typical;							
	safety isolation SELV-rated, referenced to chassis.							
	Signal output with dual function: user-selectable as either function trigger or list trigger;							
Trigger Output	function trigger provides a pulse for any programmable change in output voltage or frequency; list trigger provides a pulse if programmed as part of list transients;							
	pulse logic level, user-selectable as active-high or active-low; pulse duration, 400 μs;							
	rear panel BNC connector; safety isolation SELV-rated, referenced to chassis.							
Output Voltage	Signal outputs for each output phase for monitoring the waveform of the command signal of the output amplifier;							
Monitor Outputs	0 -5 V(RMS) signal range for zero to full-scale output voltage;							
	rear panel BNC connector; safety isolation SELV-rated, referenced to chassis.							
	Signal input for external trigger for execution of programmed value;							
	logic level, TTL-compatible;							
Trigger Input	signal return common to signals, Synchronization Clock and Remote Inhibit;							
	safety isolation SELV-rated.							
	Signal input for external square wave clock to control the output frequency and phase of the waveform generated by the internal generator;							
Synchronization Signal (SYNC)	logic level, TTL-compatible;							
Input	signal return common to signals, Trigger Input and Remote Inhibit;							
	safety isolation SELV-rated.							

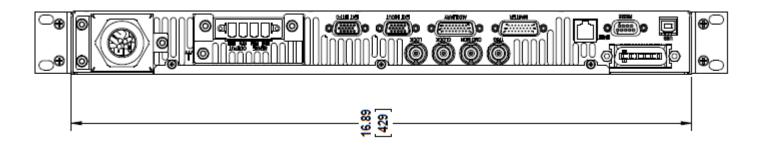

Remote Control Analog/Digita	l Signal Characteristics Continued					
Function	Characteristics					
	Signal input to turn the output on/off;					
Remote Inhibit Input	logic level, TTL-compatible; user-selectable as active-high or active-low;					
Kemote illinote ilipat	signal return common to signals, Trigger Input and Synchronization Clock;					
	safety isolation SELV-rated.					
	Signal output indicating that a fault condition is present;					
	solid-state, normally-closed ac/dc switch;					
Summary Fault Output	logic level, active-low (open-circuit when fault is not present);					
Summary Fault Suspec	switch ratings: 50V, maximum peak voltage; 0.1A, maximum current; 2.5 Ω , maximum resistance; 1 μ A, maximum off-state leakage current;					
	isolated from all other signals; safety isolation SELV-rated.					
	Signal outputs for Master Clock and Lock signals used in synchronizing two or more AC sources;					
LKM (Option)	logic level, TTL-compatible;					
LKW (Option)	rear panel BNC connectors for each signal;					
	safety isolation SELV-rated, referenced to chassis.					
	Signal inputs for Auxiliary Clock and Lock signals used in synchronizing two or more AC sources;					
LKS (Option)	logic level, TTL-compatible;					
της (Οριίση)	rear panel BNC connectors for each signal;					
	safety isolation SELV-rated, referenced to chassis.

Consult Factory for high	her power	and/or add	itional phase configurations	

¹ ATE version Multi-Chassis Packages include all ATE version chassis. Any chassis can be the master. One Parallel Communication System Interface Cable (PN: 890-010-26) is included for each non-master chassis.

⁴ Enhanced version Two Phase Multi-Chassis Packages include all Enhanced version chassis with LKM option on the master chassis and LKS option on the remaining chassis. Required Clock & Lock BNC cables and BNC Tees are included. NOTE: Requires direct programming from individual front panel or over individual LAN (LXI) or GPIB connection for each chassis/phase. This configuration is not supported in Virtual Panels Software.

Warranty Statement:

AMETEK Programmable Power Inc. warrants its products to be free from defects in material and workmanship. The warranty period is from the date of original shipment of the product to the original purchaser (see website for warranty periods by product). Asterion AC comes with a one (1) year warranty. Extended warranties available.
