Airbus 320 Flight Simulator and Visual System

AT-F1005

* The pictures above are for reference only.
The real products purchased should be considered as final.

The A320 Flight Simulator can be used for the training of pilots in a simulated but realistic replica of Airbus 320 cockpit, while educating the students in the various avionics & aircraft instrumentation concepts.

The Simulator System will be a complete functional replica of the cockpit of a standard Airbus A320, including the avionics systems.

● Features

The simulator is to be used for pilot familiarization and training on A320, and teaching students about the effect of aircraft controls at different stages of flight (take off, level and landing), aircraft instruments (PFD, ND and EICAS), communication and navigation systems (VOR, ILS Systems, TCAS/ATC).

● Specifications

The simulator system include the following units :

1. Control panels and instrumentation
   • Main instrument panel
   • Glare shield
   • Pedestal
   • Overhead

2. Flight controls
   • Side stick
   • Throttle sets
   • Rudders pedal
3. Computer system

4. Software
5. A320 with pilot seats
6. Visual system
7. Instructor station (with monitor)
8. A320 Failure Package
   (include troubleshooting and monitor)

Main instrument panel

Glare shield

Pedestal

Overhead

● Accessories

1. Operation manual
2. 3-set computer
3. Visual Display
