Evolving Wireless Devices

- Today's smartphones and tablets use a variety of wireless standards. Wireless communications are continuing to evolve to meet users' needs and wireless applications are becoming part of everyday life.
- R&D and manufacturing of mobile terminals and communications modules require support for assorted wireless tests to assure continuing product quality.
- Manufacturing of multi-wireless-standard mobiles and modules requires configuration of an efficient and low-cost test environment.

Test Set for Manufacturing

Fast Measurement/ Cut Costs

- All-in-one platform accommodating four test modules
- Platform for production lines
- High-speed CPU and large memory in each installed module
- Supports latest manufacturing technologies

Supports Multiple Wireless Technologies

- GSM/W-CDMA/C2K/LTE
- WLAN 802.11a/b/g/n/ac
- Bluetooth
- FM
- GNSS (GPS)
- Digital broadcasting

Expandability/Potential

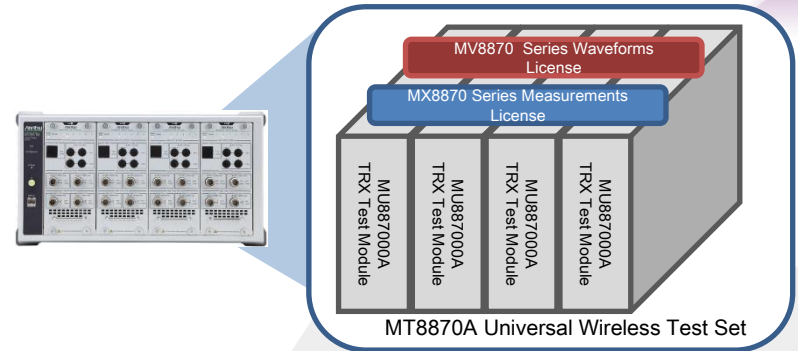

- All-in-one unit supporting assorted wireless standards tests
- Expandable by software
- Standards future-proof wideband hardware design

Supports Up to Four Modules

Cuts Costs

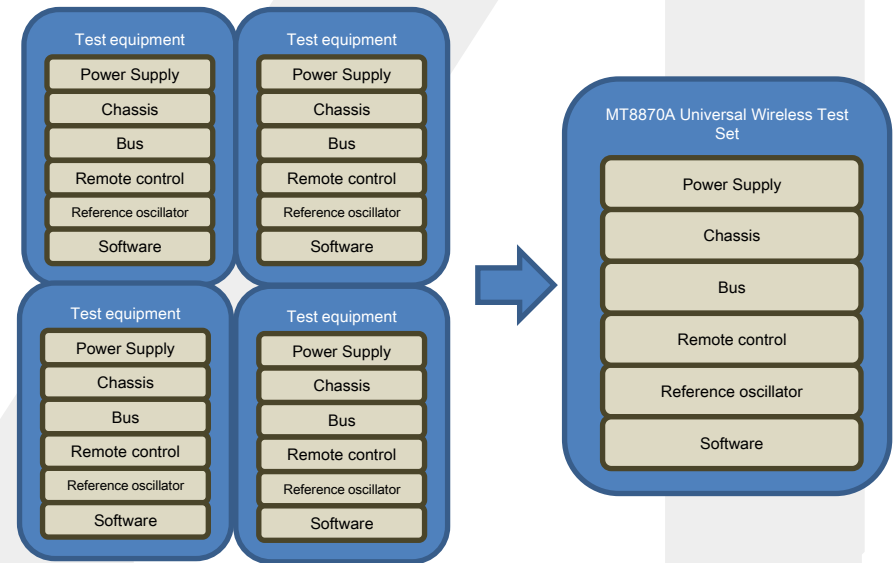

Supports Four Modules

- The MT8870A Universal Wireless Test Set supports up to four test modules in one main frame chassis.

Shared Hardware Resources Cut Costs

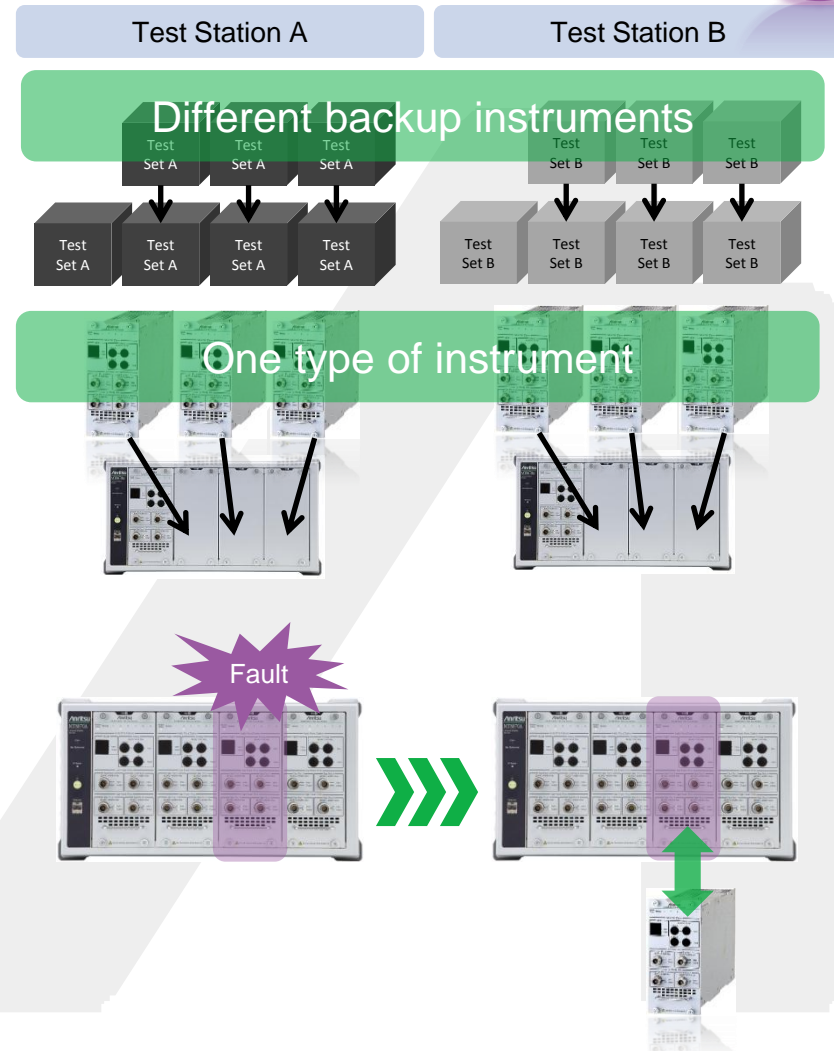

- With four TRx modules installed in one MT8870A main frame, the shared power supply, chassis, internal communications bus, remote controller, reference frequency oscillator, software license, etc., cut capital costs.
- Installing four test modules cuts cost per unit.

Modular Design Cuts Costs

Cuts
Costs

- **Supports Flexible Manufacturing Line Changes**
 - The MU887000A TRx Test Module easily supports production line configuration and model changes, eliminating backup instruments and cutting capital investment.
- **Cuts Line Downtime**
 - Easy module swap-out cuts line downtime.
 - No wasted time disconnecting remote control cables, power cables and coaxial cables on back panel so changeovers only take minutes.

Production Line Aware Platform

Cuts Costs

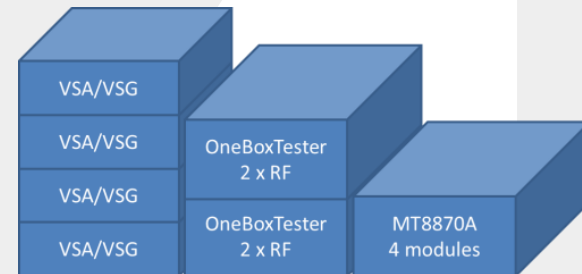

- **Slimmed Down Auto-Measurements**

- Inspection production lines use auto-measurement programs to capture numeric measurement results from test set for pass/fail evaluation.
- Eliminating line displays and instrument front-panel buttons while supporting remote control via Ethernet or GPIB cuts instrument costs, helping reduce device production costs.

- **50% to 75% Smaller Footprint**

- Instead of four separate test stations each requiring setup, the all-in-one, high-performance MT8870A main frame with up to four installed test modules saves both production line space and setup time.

Compared to Anritsu products	VSA/VSG	All-in-one Tester (Parallel Phone)
MT8870A 4 Module Configuration	75% smaller	50% smaller

Shorter Measurement Times

Fast
Measurements

- **Fast Measurements Independent of External PC**

- The Dual Core CPU, DDR3 memory and fast PCIe bus in each MU887000A TRx Test module assure fast measurements independent of the external PC.

- **Signal Generator and Signal Analyzer in Each Test Module**

- Each of the four test modules installed in the main frame has an independently operated signal generator and signal analyzer supporting separate parallel testing of up to four mobiles.

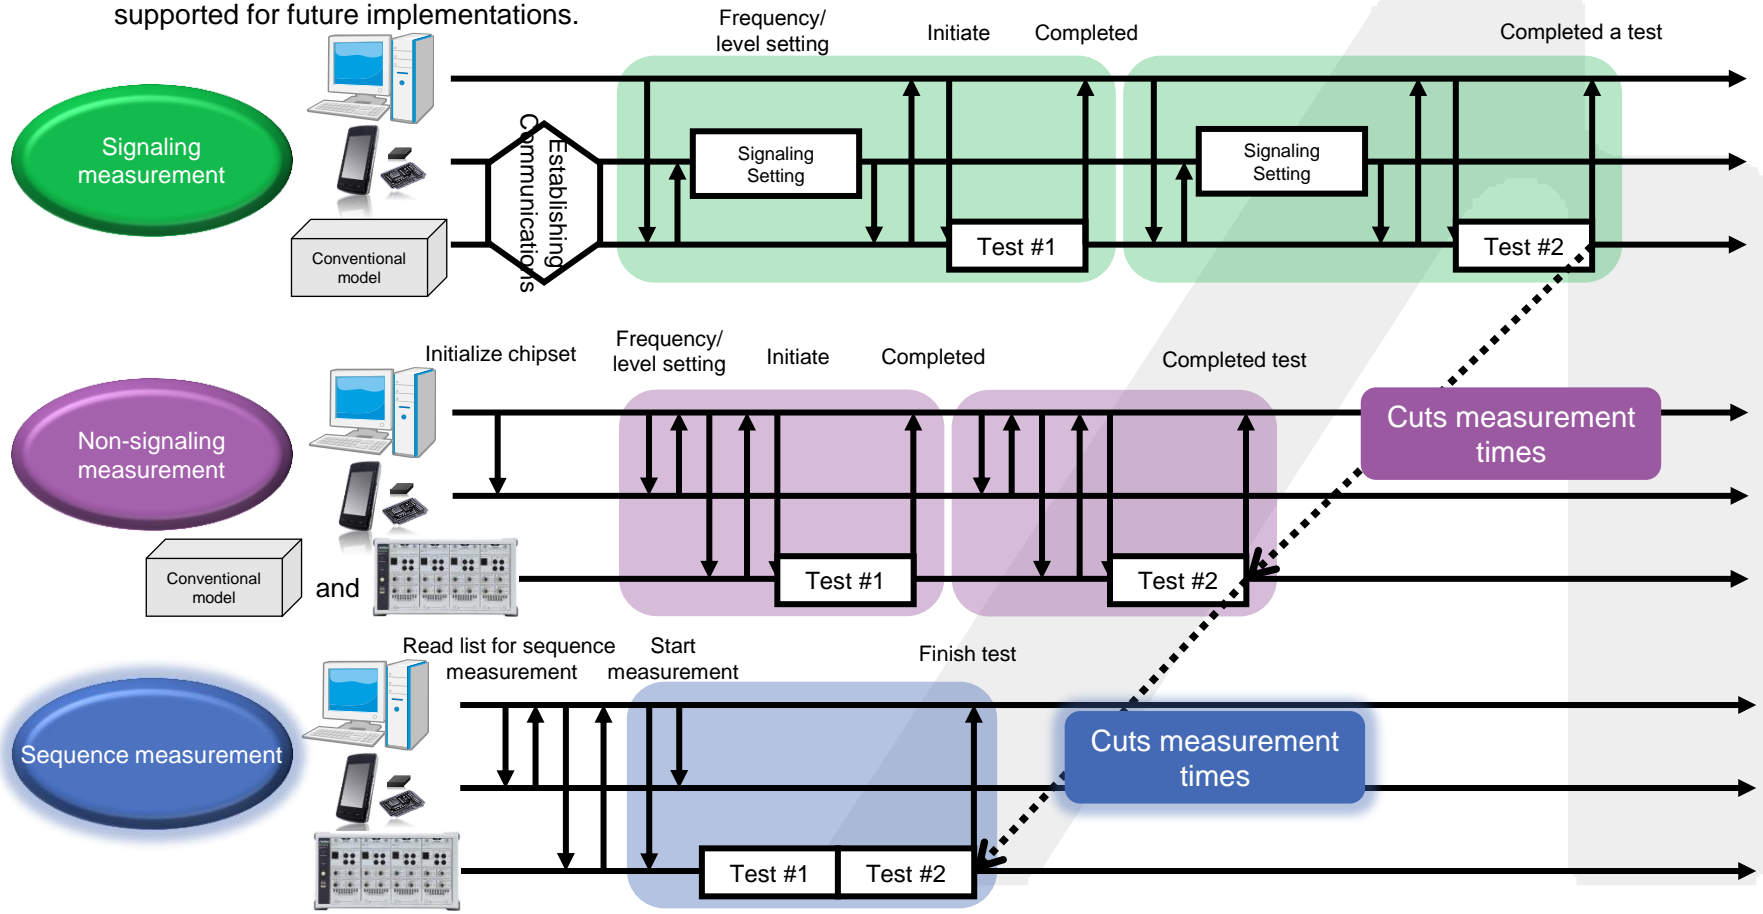

- **Large Memory**

- 2-GB digitizer memory for Tx tests supports one-run, long-term capture.
- Rx test waveforms can be preloaded into 4-GB ARB memory, cutting reload times when switching wireless standards.

Supports Latest Manufacturing Technologies

- Signaling measurements using wireless communications to set devices and test set have long test times due to the time taken to establish wireless communications. The supported non-signaling method cuts test times by omitting wireless communications and controlling directly from an external PC. To eliminate communications with the external PC, the sequence measurement (List Mode) function performing measurement between the device and instrument according to a known measurement sequence, is also supported for future implementations.

Expandable Platform

Multi
StandardExpand
ability

- **Support Assorted Wireless Standards**

- TRx measurements of all key wireless standards are supported by installing the TRx test modules with optional measurement software packages and waveform files in the MT8870A Universal Wireless Test Set.

- **Easy Software Expansion**

- Since hardware specifications are shared by all MU887000A modules, new standards are easily supported by adding software licenses.

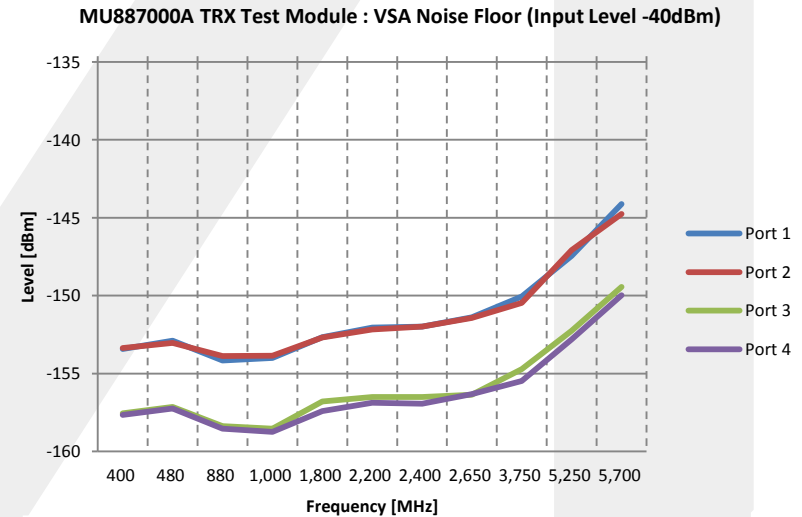

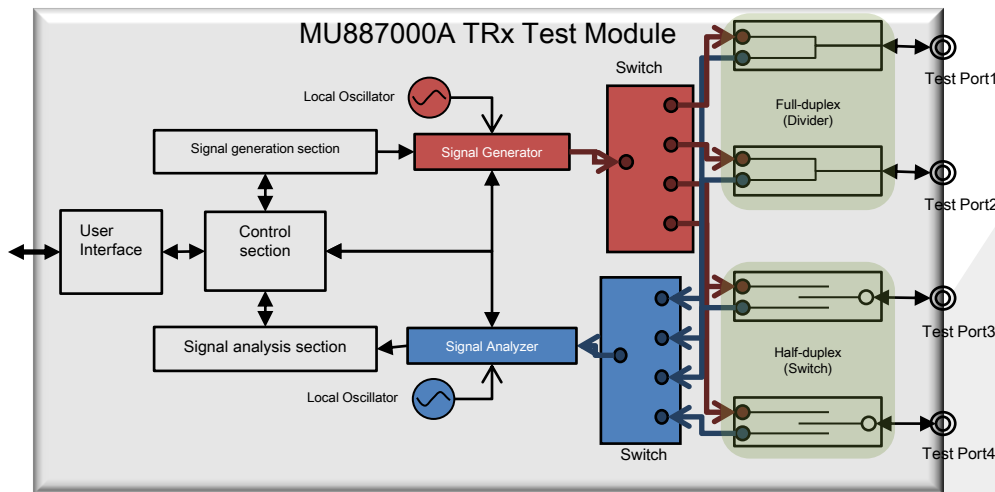

Four Ports on Each TRx Test Module

Multi
StandardExpand
ability

Two Connector Types

- Full-duplex (Test Port 1 and 2)
 - ✓ Test port for cellular applications supporting simultaneous TRx.
- Half-duplex (Test Port 3 and 4)
 - ✓ Supports either Tx or Rx with better input sensitivity than full duplex. Useful for WLAN antenna coupling measurements.
- All test ports are calibrated, eliminating the need for external couplers and switches.

Note: This values are typical values

High-Performance/Wideband Platform

Multi
Standard

Potential

- **160MHz Bandwidth as Standard**

- The latest 802.11ac wireless and LTE-Advanced bandwidth standards are supported as standard. Usually, upgrading bandwidth requires extra costs for changing instruments, adding options, etc., but since the MU887000A has a 160MHz wide bandwidth as standard, these extra costs are unnecessary.

- **10 MHz to 6 GHz Wide Frequency Range**

- To provide future-proof frequency-band extendibility, the frequency band covers a wide range from 10 MHz at the lower end to 6 GHz (option) at the upper end.
- The wideband (10 MHz to 6 GHz) signal generator and signal analyzer support easy and smooth extendibility for new wireless standards, unlike dedicated test set supporting only specific frequencies.

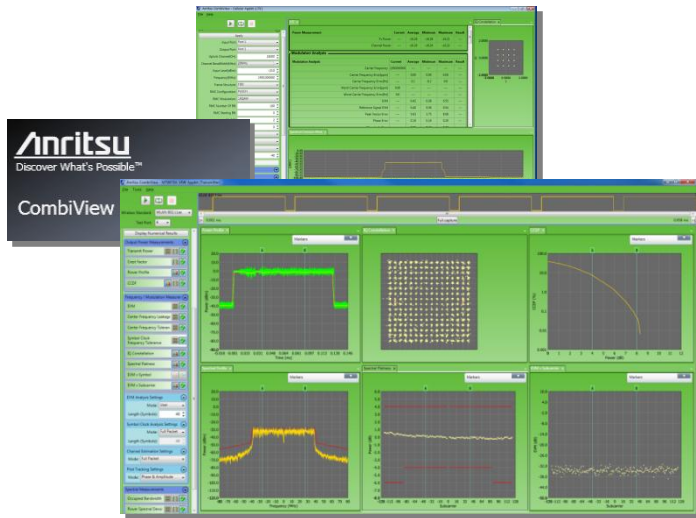

Key Facts

Model/Name	Parameters	Specifications
MT8870A Universal Wireless Test Set	Number of Slots	4
	Remote Control	Individual control of each module Ethernet (standard) or GPIB (option)
	User Interface	PC Applications (CombiTest/CombiView)
	Size and Mass	426 (W) × 221.5 (H) × 498 (D) mm (excluding protrusions), ≤30 kg (4 modules)
MU887000A TRx Test Module	Supported Systems	LTE FDD, W-CDMA (HSPA), GSM (GSM/GPRS/EGPRS), CDMA2000 (EV-DO), WLAN (802.11a/b/g/n/ac), Bluetooth BR/EDR/BLE
	Frequency Range	10 MHz to 6 GHz (standard: 3.8 GHz*) *Extend to 6 GHz as option
	Bandwidth	VSA: 160 MHz max. (200 Msa/s max.) VSG: 160 MHz max. (20 k to 200 Msa/s)
	RF Test Ports	4
	ARB Memory	4 GB (1 Gsa)
	Digitizer Memory	2 GB (256 Msa)
	Measurement Methods	Non-signaling (Direct Mode)

See product brochure for more details

PC Applications

- **CombiView**

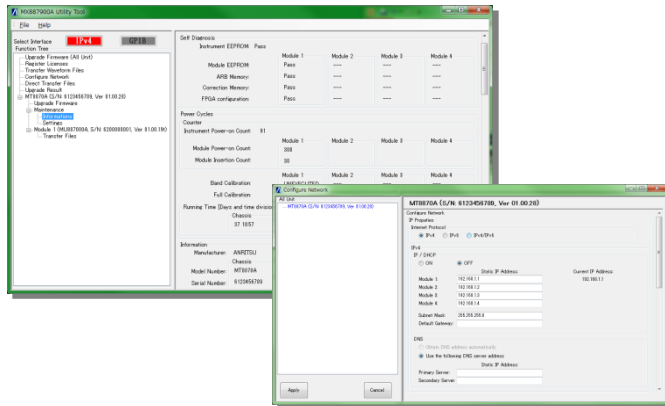

- CombiView is PC application software with a GUI for displaying detailed information, such as the test device Tx power and status, modulation constellation, etc., on a PC for use at R&D, on production lines, and at troubleshooting.

- ✓ Graphical display of Tx measurement results using Windows interface
- ✓ Remote control of MT8870A (MU887000A) via Ethernet and GPIB (option)
- ✓ Setting of MT8870A (MU887000A)
- ✓ Signal generator interface for Rx tests

- **MT8870A Utility Tool**

- The MX887900A is a utility tool software package for installing in a PC. It can be used to detect the networked MT8870A via Ethernet or GPIB (option) and for block updates such as internal firmware.

- ✓ Displays details of MT8870A and MU887000A TRx Test Module(s) detected on network
- ✓ MU887000A TRx Test Module firmware upgrade
- ✓ Transfer waveform file
- ✓ License registration

MT8870A Summary

Low-cost instrument for production lines

- Low cost due to resource sharing by four modules in one main frame
- Shared modules cut equipment investment

Cuts measurements times

- Supports fast calibration and fast verification sequence measurement
- Each module has Dual Core CPU and high-speed bus
- 4-slot module configuration supports four parallel measurements

Supports mobile communications (cellular) and short range wireless

- Supports assorted short range wireless standards, such as FM/Audio, as well as cellular

Expandability

- Individually controlled modules
- Shared platform supports expansion by adding software

Future-proof

- Supports frequencies and bandwidths required for LTE-Advanced and IEEE802.11ac
- Modular design offers low-cost expandability

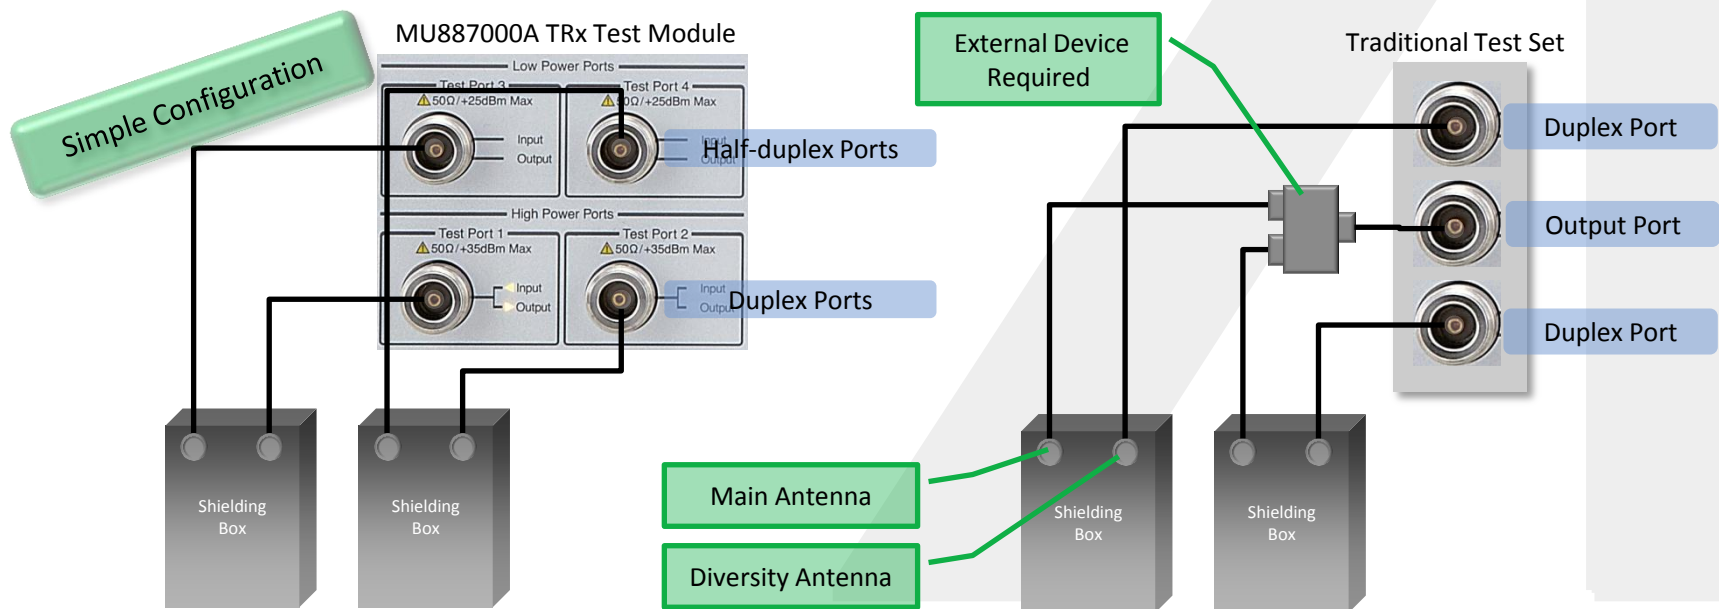

MT8870A Universal Wireless Test Set Introduction

- Anritsu Mobile Communications Equipment Test Solution
- MT8870A Product Introduction
 - Measurement Instrument for Manufacturing
 - MT8870A/MU887000A Features
- Application Examples
 - Smartphone Manufacturing
 - Communication Module Manufacturing

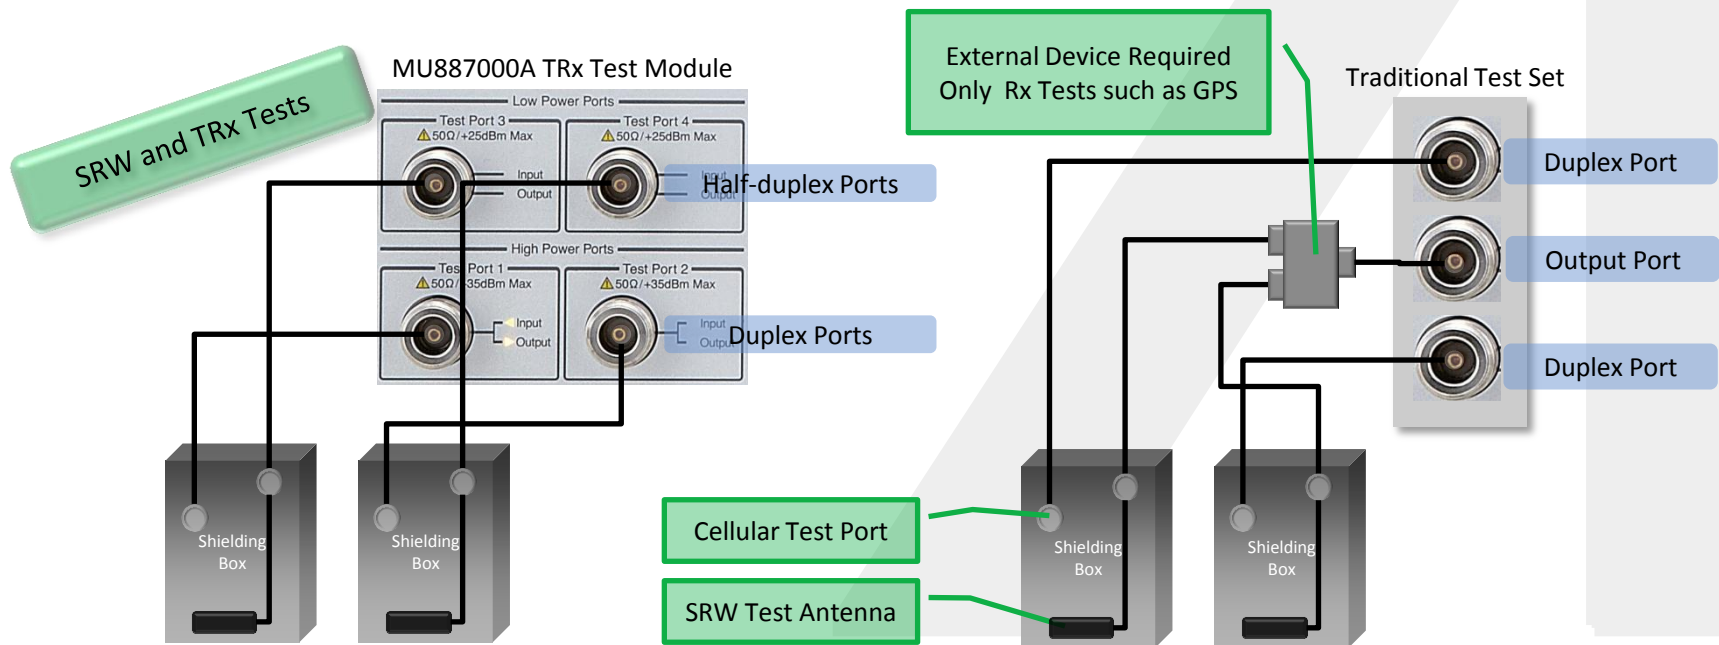

Advantages for Cellular Calibration

- The MU887000A TRx Test Module RF front end is useful for cellular calibration. Conventional instruments support only one connector for diversity antenna tests and require an external switch to connect two shield boxes. The MU887000A TRx Test Module has four RF test ports for connecting to two shield boxes without external devices. As a result, not only does it eliminate external devices but it also simplifies control software, supports fast switching, and controls external losses.

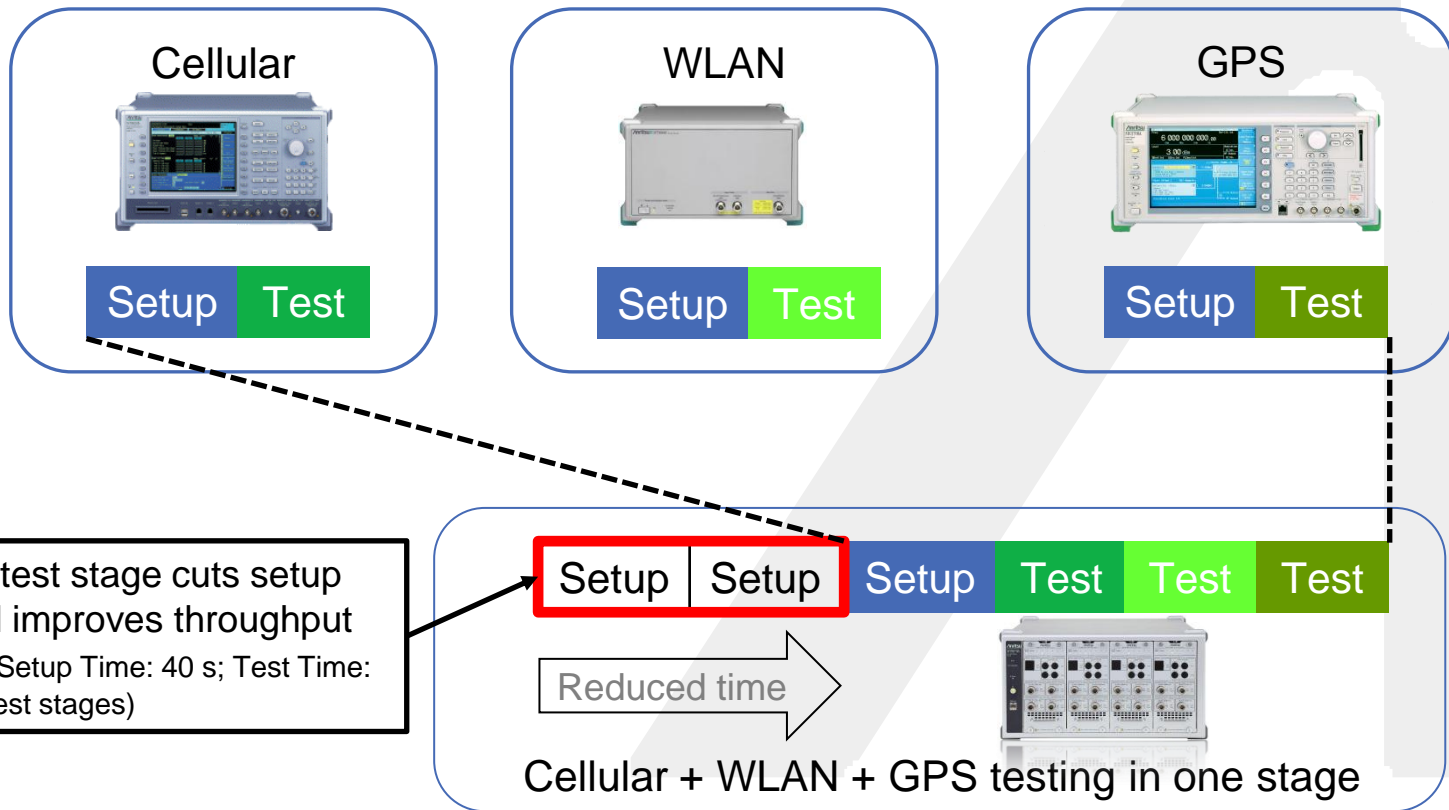

Advantages for Short-Range Wireless Tests

- Smartphone manufacturing requires both cellular and short-range wireless tests, such as WLAN, and the RF front end of the MU887000A TRx Test Module is useful for this too. Conventional instruments usually only have dedicated output ports in addition to the duplex ports for cellular tests and such ports only support Rx tests like GPS. These TRx modules each have two duplex and two half-duplex ports for running WLAN and Bluetooth tests as well.

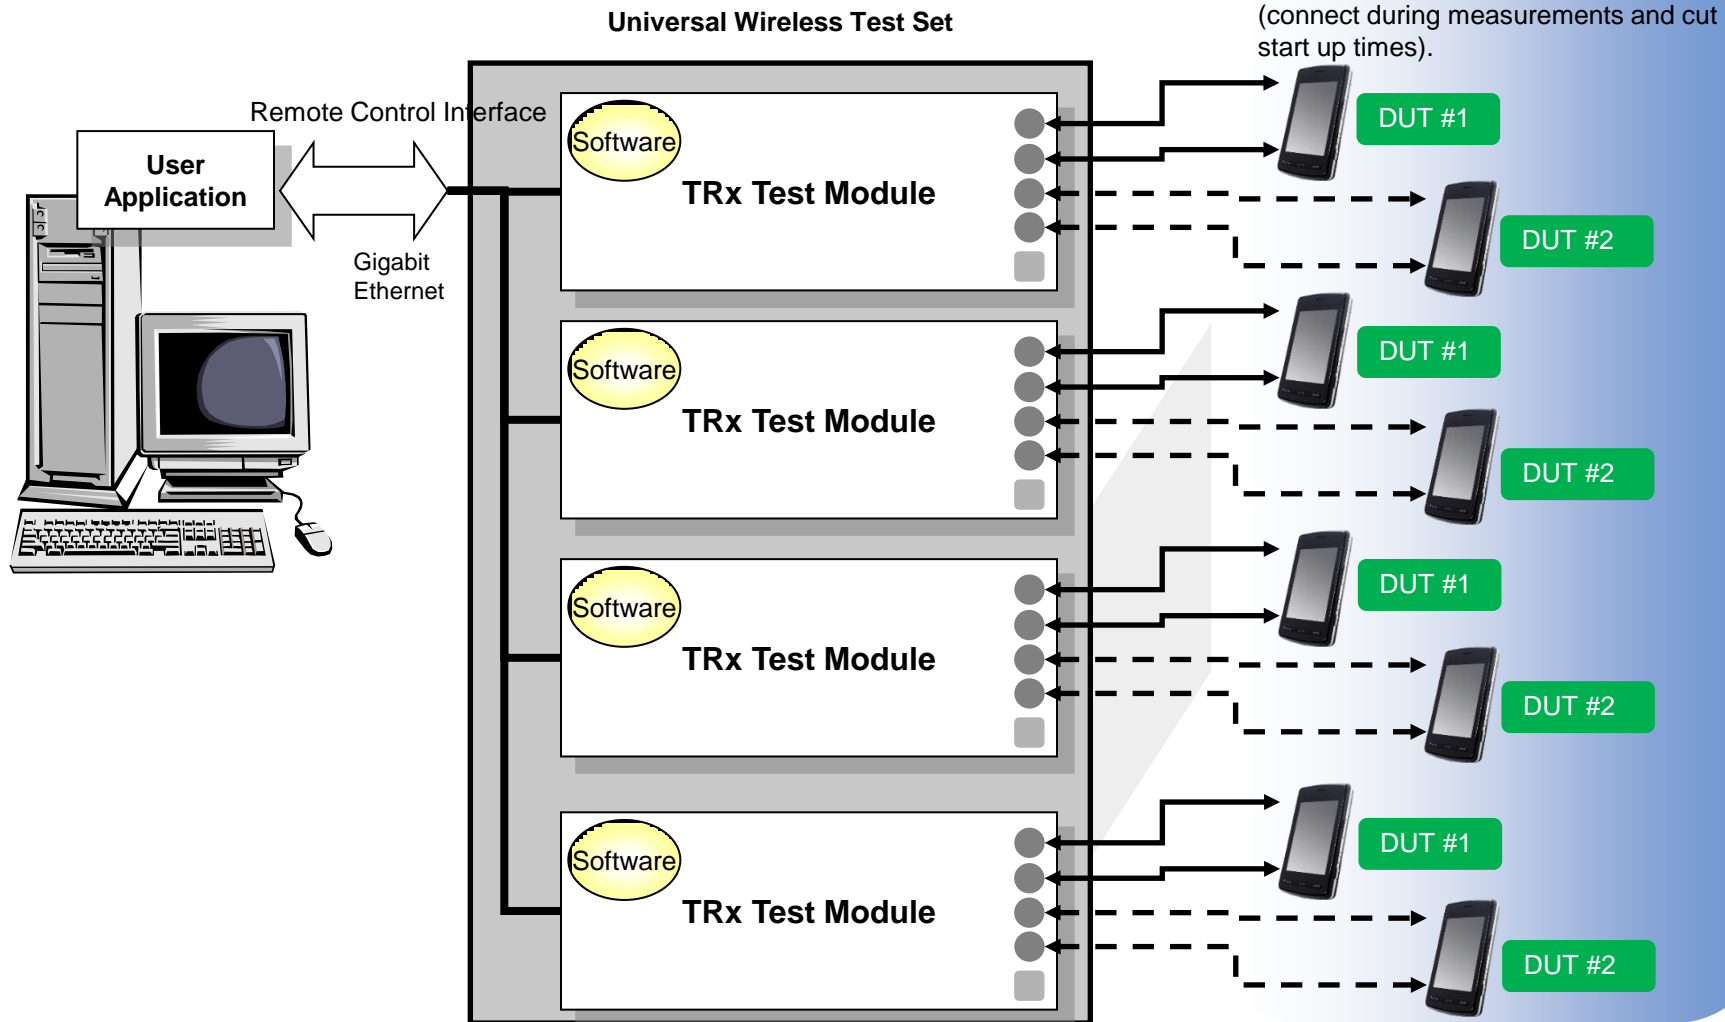

Improve Manufacturing Throughput by Cutting Setup

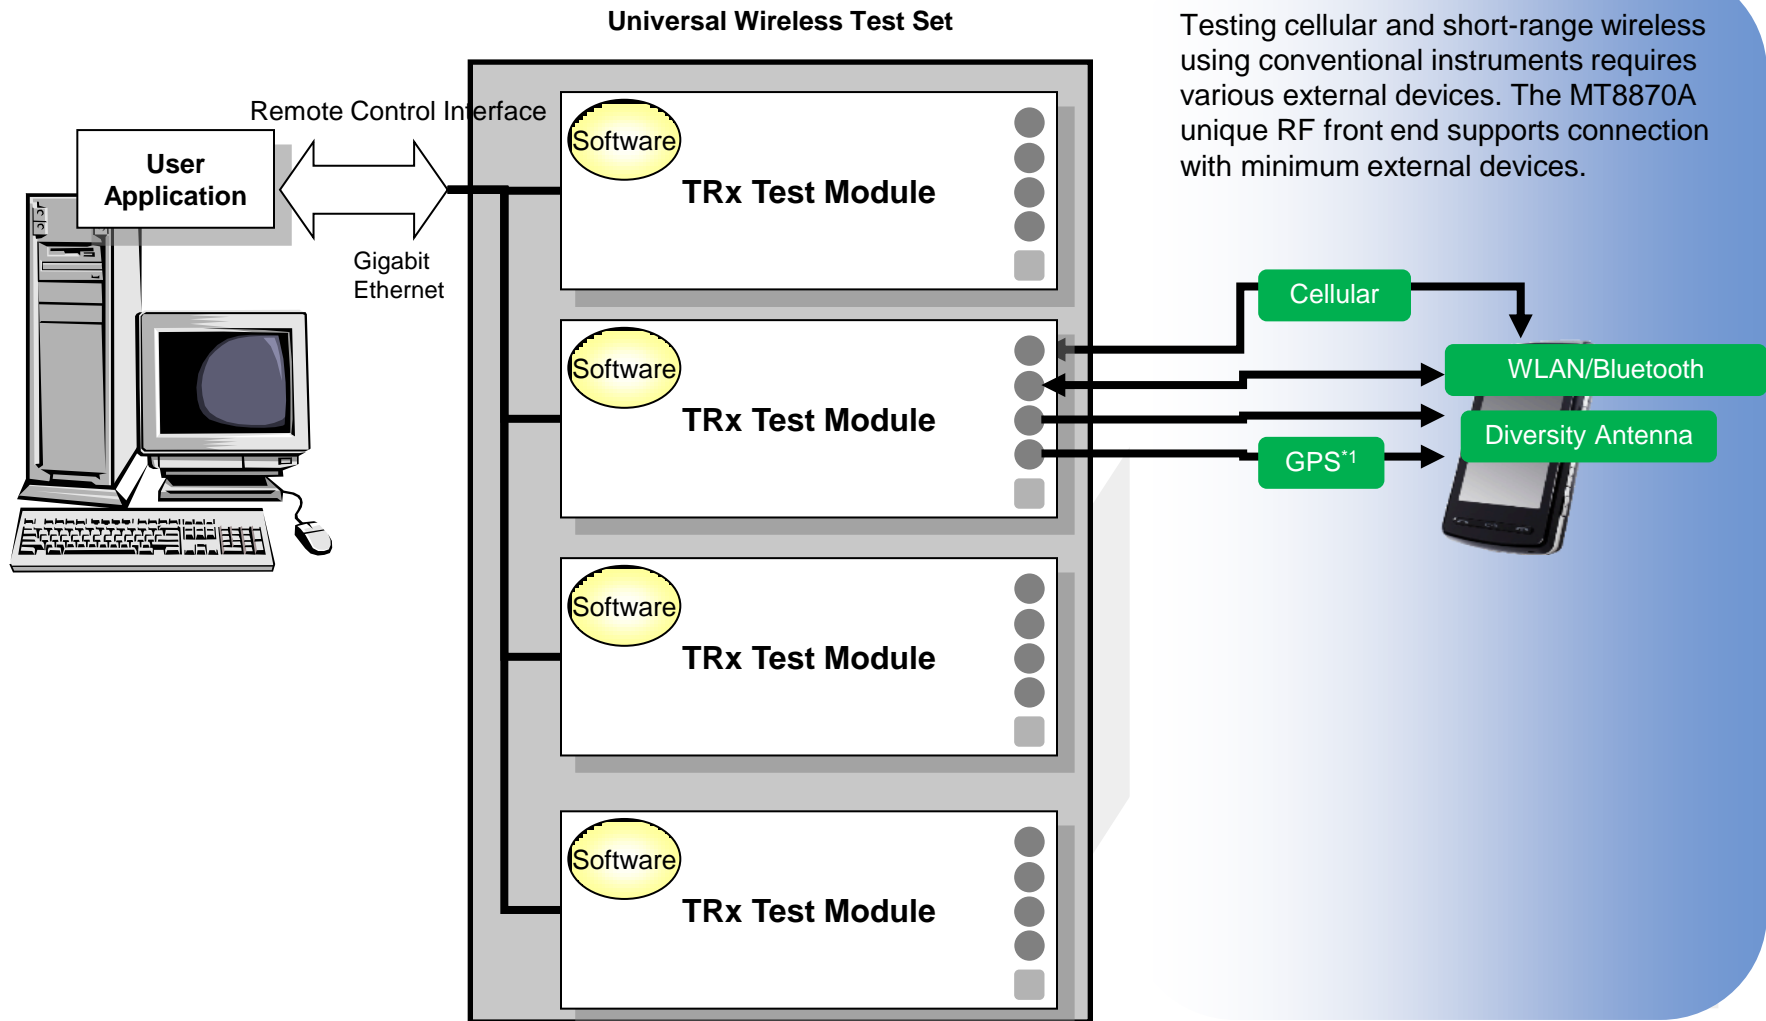

- Setup time is a large burden on manufacturing efficiency. Since one MT8870A main frame supports every test, wasteful setup time is eliminated.

Streamline Cellular Production Line

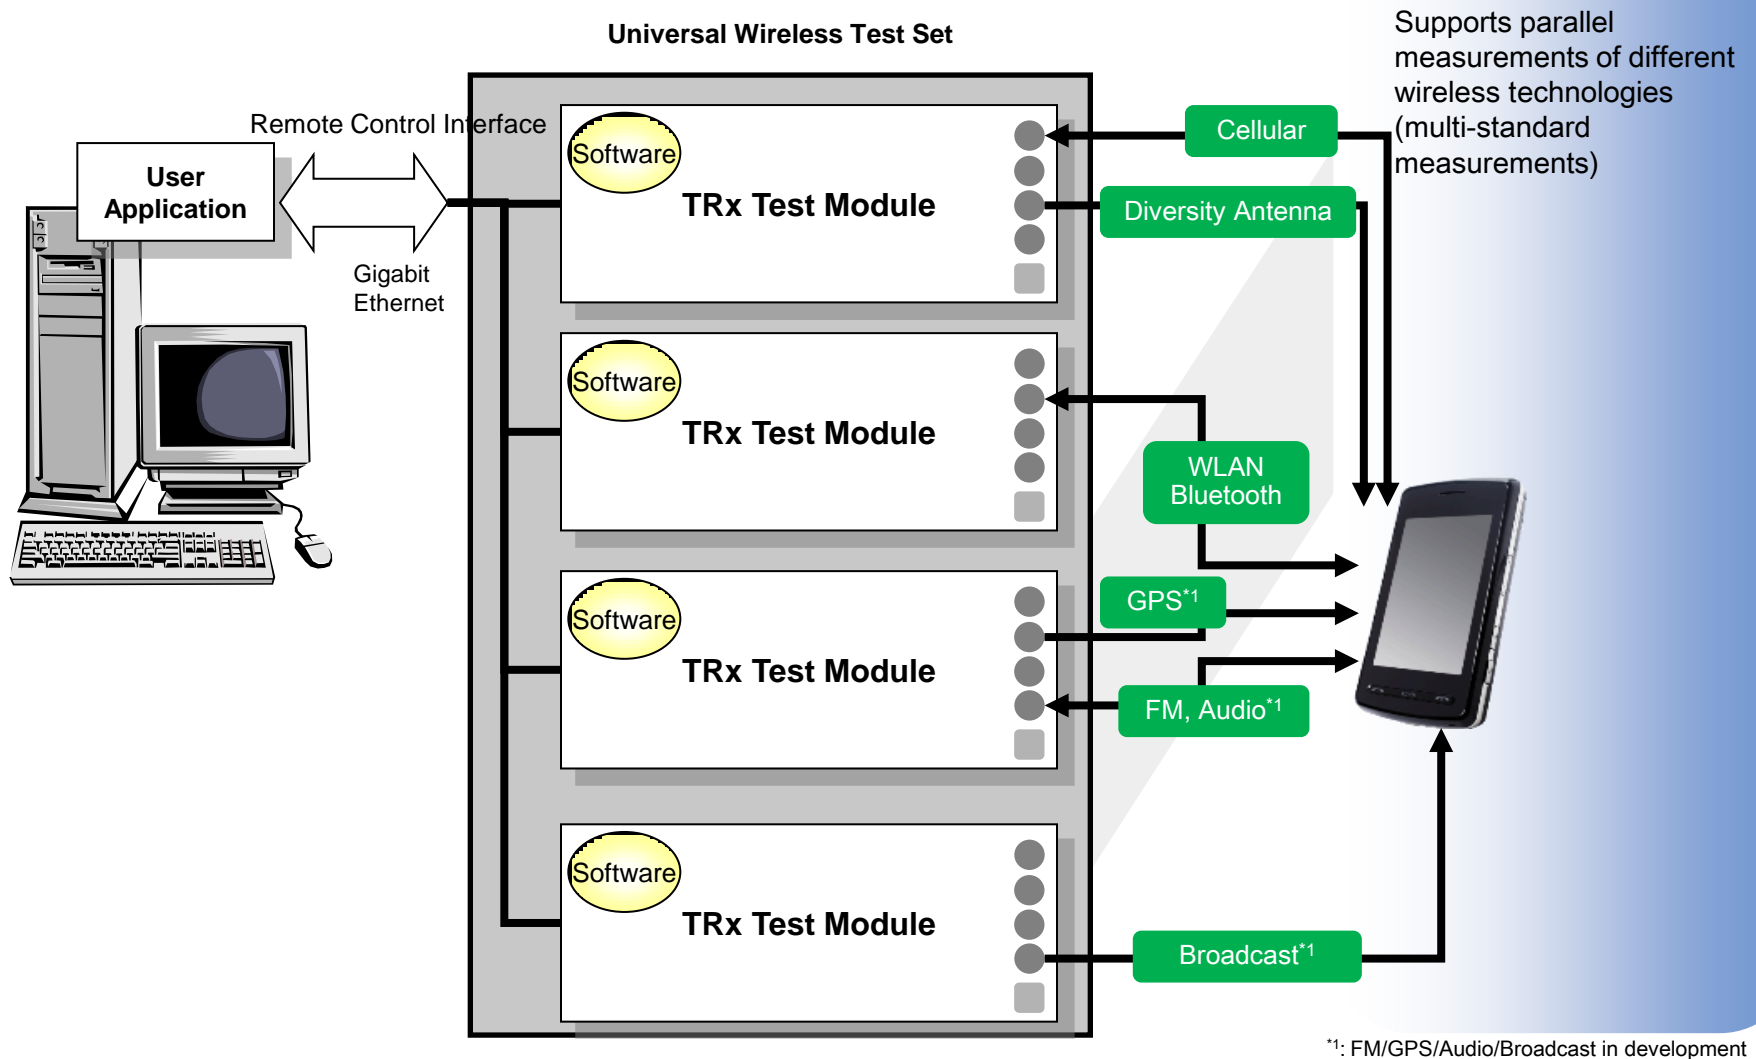

Streamline Cellular Production Line including Non-cellular

*1: GPS in development

Smartphone Manufacturing (Parallel Test)

*1: FM/GPS/Audio/Broadcast in development

Compatibility with Anritsu MT8820C

- The MT8870A Universal Wireless Test Set supports two types of remote commands: Native and SCPI.
- The Native commands are based on the MT8820C remote command set and have high compatibility, particularly for sequence measurements and calibration.
- Compatibility with the MT8820C helps minimize MT8870A installation costs.

Smartphone Manufacturing

The MT8870A supports smartphone manufacturing flexibility.

MT8870A Universal Wireless Test Set Introduction

- Anritsu Mobile Communications Equipment Test Solution

 - Measurement Instrument for Manufacturing
 - MT8870A/MU887000A Features
- Application Examples
 - Smartphone Manufacturing
 - Communication Module Manufacturing

Advantages for 802.11ac Manufacturing

- Testing 802.11ac does not require extra costs because the MU887000A TRx Test Module supports the 160MHz bandwidth as standard.

All-in-one Unit Supports 11ac Combo Module

- The MU887000A TRx Test Module with four RF test ports supports connection with 802.11ac Combo Modules (80/160 MHz) without external devices.
- Wide frequency range from 10 MHz to 6 GHz (option) supporting multiple wireless technologies in one unit.

¹: FM/GPS support in development

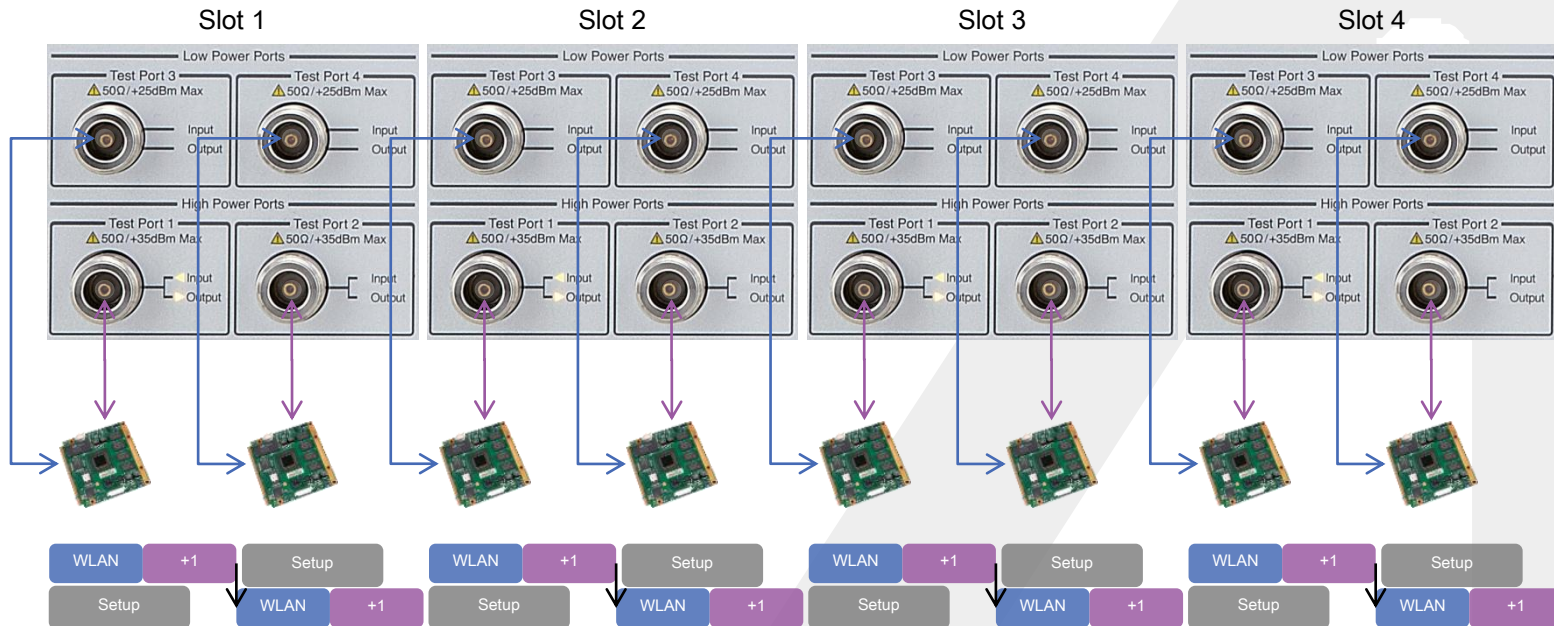

16 Simultaneous Connections

- Versatile development flexibility with four devices connected to each of four modules
- Up to 16 test fixtures can be connected to a single MT8870A test set when fully loaded with 4 MU887000A TRX modules. As each module is completely independent, this facilitates the testing of four devices in parallel. This test system approach eliminates the need for external combiners in a test system which have poor isolation, and also reduces the required test fixture path calibration.

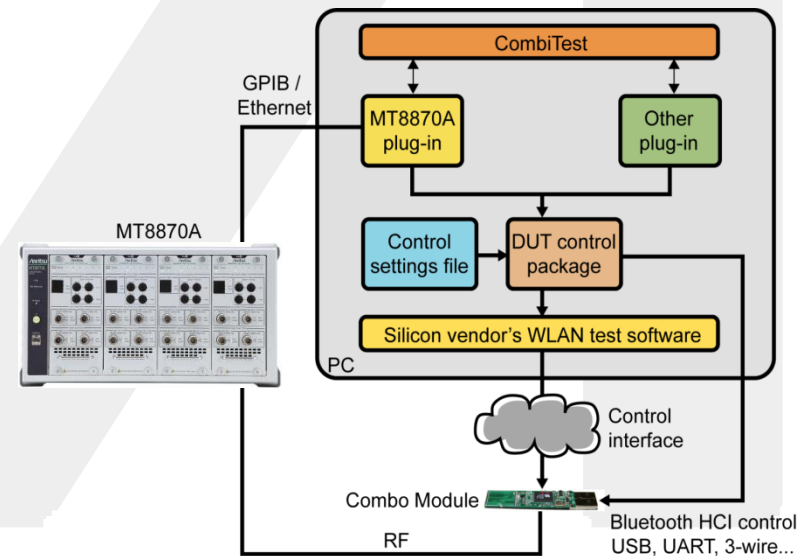

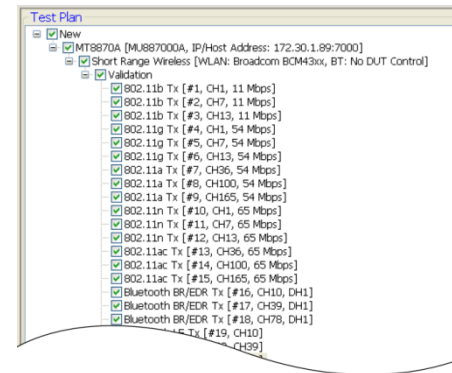

Improves System Efficiency

- Versatile development flexibility with four devices connected to each of four modules
- Connecting two DUT devices each with two RF terminals to each of the four TRx test modules supports simultaneous connection of 8 test devices, simplifying system setup for 802.11 diversity antenna tests.

CombiTest Supporting Control of Key Chipsets

- **Simple and fast PC application for creating individual calibration, validation and manufacturing test plans.**
 - Easy drag-and-drop interface.
 - Create and execute test plans including 802.11 and Bluetooth TRx test cases.
 - Automatically save results including graphic displays to database.
- **Chipset control package**
 - Control packages developed in cooperation with major chipset developer.
 - Automatically set and control chipset.
 - Create and edit completely automated test in few minutes.

Manufacturing Communications Modules

The MT8870A cuts communication module manufacturing costs.
