

PV150+

A fast and simple
PV tester

The PV150+ allows electrical safety and performance verification of modern photovoltaic installations.

The PV150+ is an upgraded version of the popular PV150, designed to better support the testing of PV modules with recent technology advances and associated higher efficiencies.

Combines ground continuity, DC operating power and operating current test functions. It can also test insulation resistance, open circuit voltage and short circuit current at the push of a button.

Why buy the PV150+?

- > Improved capacitive induced in-rush protection by a factor of 300%
- > Combines PV commissioning tests required by IEC 62446.
- > Enables the user to safely test energized PV arrays
- > Easy to use, single key testing and measurement operation
- > On-board data storage and USB connectivity for data export

Key Features:

- > Ground (earth) continuity measurement with test lead null for long test-leads
- > PV string open circuit voltage measurement up to 1000V DC with polarity indication
- > PV string short circuit current measurement up to 15A DC
- > PV array insulation test at 250/500/1000V
- > Tests individual PV modules or strings
